# FCoV Ag/Ab

## **General Information**

Purpose: Detection of Feline Corona virus antigen / antibody

Principle: Immunochromatographic assay

**Specimen:** Ag - Feline feces

Ab - Whole blood, plasma or serum

#### **Materials provided:**

- Anigen Rapid FCov Ag/Ab test device
- Sample collection tube containing assay diluents
- · Disposable swab
- Disposable dropp
- · Assay diluent dropping bottle
- · Anticoagulant tube
- Disposable capillary tube

### **Special Features:**

- One-step testing procedure : Quick & Accurate
- · High sensitivity and specificity

## **Test Procedure**

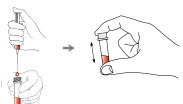

#### **FCoV Ag Test**

- 1 Collect a sample from the feline feces by using the swab.
- Insert the swab into the sample collection tube and stir the swab at least 10 times.
- 3 Discard the swab while squeezing the swab against the wall of the tube.
- 4 Wait until large particles to sink and take the supernatant by using disposable dropper provided.
- 5 Add 4 drops into the sample hole on the test device.

#### **FCoV Ab Test**

Put the collected blood sample into the anticoagulant tube. Close the cap on the anticoagluant tube and invert the tube five times to mix the blood and the EDTA.

Whole blood + EDTA
or

Plasma or Serum

- 2 Add 10μℓ of the serum, plasma or whole blood to the sample hole by using capillary tube.
  - 1000
- 3 Add 3 drops of the assay diluents into the sample hole on the test device.

## **Ordering Information**

Cat. No.	Description	Туре	Pack size
RC1207DD	FCoV Ag/Ab	Dual Device	10 Tests/Kit
